

Snowflake User Guide

Each participant should follow these steps to gain access to Snowflake

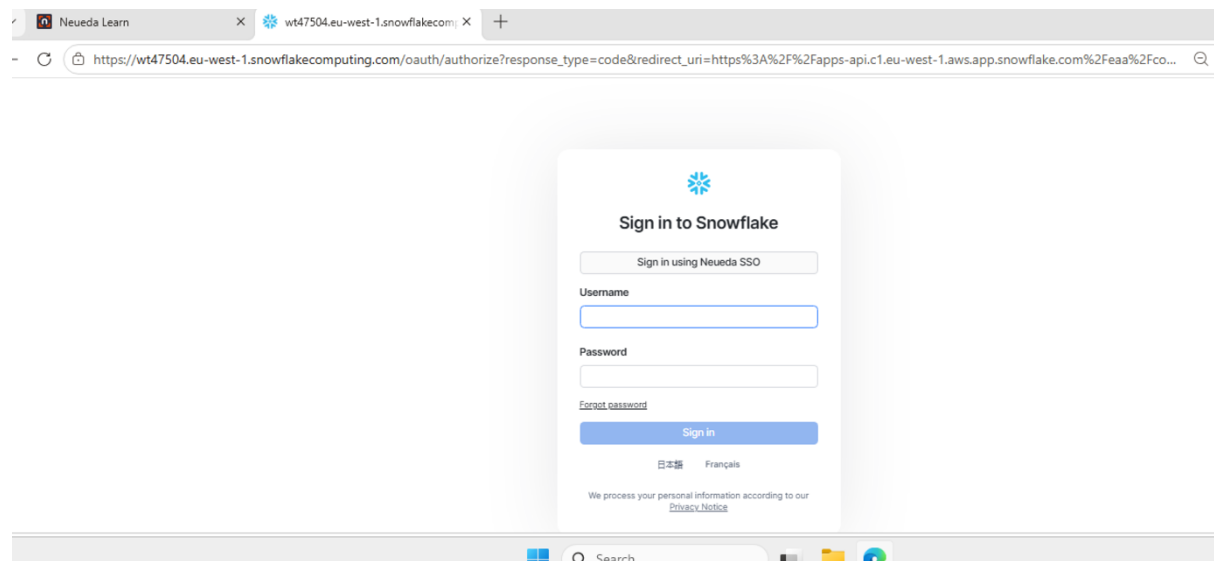

Step 1 - Start your windows VM as usual or reconnect to it

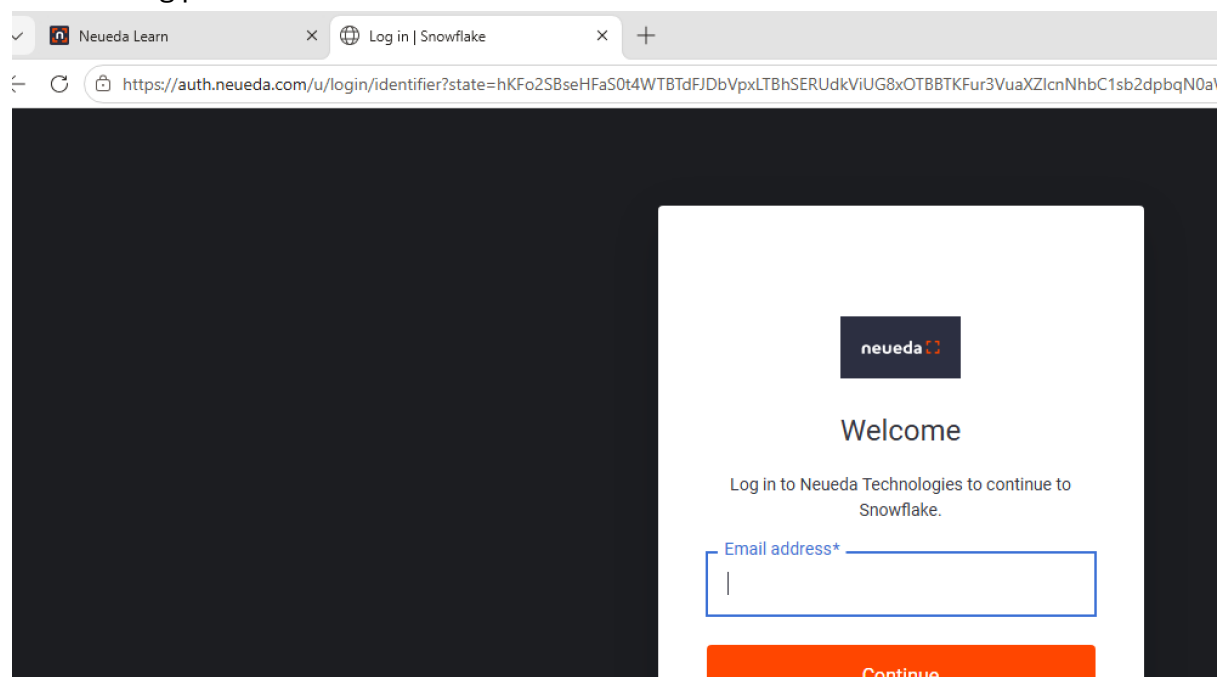

Step 2 – Wait for the portal to appear **inside** the VM and you will see a Snowflake option, click the “Open” button and wait

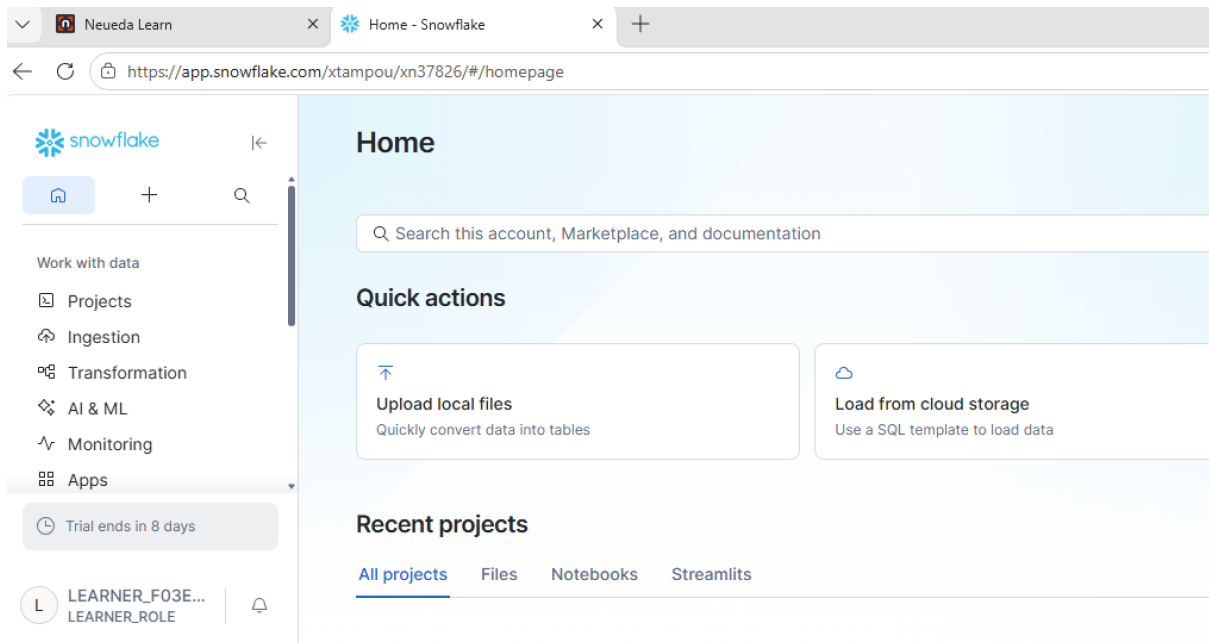

Step 3 – Click the “Sign in using Neueda SSO” button. Unfortunately as we have no credentials inside of the VM, this will require them to sign in again as seen in step 4.

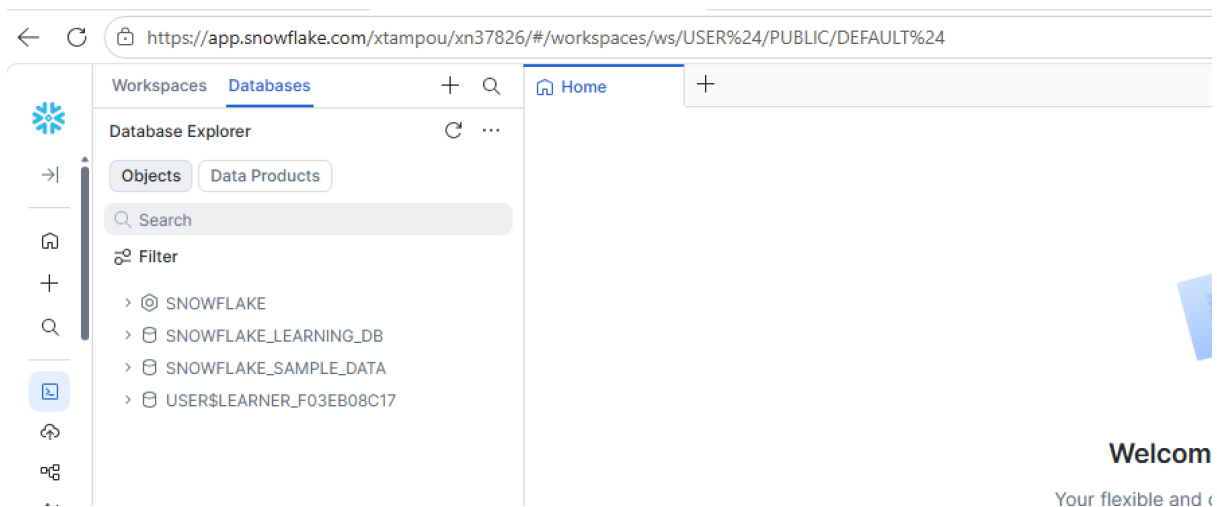

Step 4 – Enter the same email and password that the participant used for logging into the learning portal

Step 5 – You will then be inside Snowflake

Step 6 – Navigate to Projects -> Workspaces and selected the Databases Tab

Step 7 – The user can now query from here
